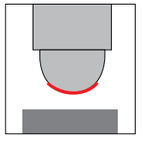
Size: 13,9 x 7,5 x 7,5 cm.

Max. printsize:
80 x 25 mm.

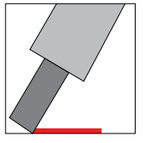
Doming

Doming is a printing technique where several materials, mostly stickers, are being applied with a transparent coating. A resin layer (epoxyresin) gives a 3-D lens effect, and depth and extra brightness to colours.



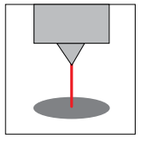
Pad printing

This method is the fastest and most accurate since it allows to print logos with a high number of colours on usually most surfaces. Generally the print is applied on small objects made of plastic or other hard materials, on which the paint is transferred with a silicon pad.



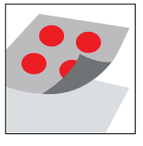
Silk screen

Silk screen printing is a stencil technique in which ink is forced through a mesh, originally of fine silk but now commercially more likely to be nylon. It's an allembracing process used on general materials, metal, plastic pens and PU (simulated leather).



Laser engraving

This technique uses a laser beam to print text, logos or drawings by engraving the object's surface. Generally it is used on metal but the same technique can also be applied with excellent results on wood or plastic.



Transfer

This is a digital print on a paper label, it is then specially prepared for the transfer to be applied at high temperature on the object using a hot-press.

Embroidery

This technology highlights the logo with elegance: the logo is embroidered on the object's surface. The embroidery can be made on plain/flat surfaces (clothing) or irregular/uneven surfaces such as hats, backpacks, bags, etc.

Hot foil

Hot foil printing is a method of transferring a desired pattern via heat onto a substrate. A hot foil can be applied on straight surfaces such as flasks. This technique makes it possible to customize almost the whole surface with patterns.
